Shaw Direct subscribers using a Winegard Trav'ler

Please follow the instructions below to select "SAT 107" in order to receive Shaw Direct programming within Canada.

Manual Operation

The TRAV'LER antenna is a versatile satellite antenna and can be manually set to find many different satellites individually. This function is rarely used. The instructions assume that the antenna is already in the stowed position. Note: Diagnostics and Installation menus are not required for normal operation and should only be entered by a trained professional.

1. Press and hold "POWER" for two seconds or until the TRAV'LER interface displays "POWER ON." Then, press and hold "ENTER" for two seconds.

2. The interface will ask if you wish to enter the user menu. Press the Select button to choose "Yes," and then press the Enter button to confirm the selection.

3. The user menu consists of four choices: Search Mode, Diagnostics, Installation, and Exit. Press the Enter button to choose Search Mode.

4. In the Search menu, choose from the following: Multi-Sat Mode (normal search mode), Manual 111, Manual 107, Main Menu (returns to the user menu) or Exit (enters the search routine).
Press the Select button to cycle through satellites until the asterisk is next to the satellite you wish to find. Press "ENTER" to confirm the selection.

5. The interface will ask you to confirm the change. Press "SELECT" to move the asterisk to "Yes." Then, press "ENTER" to confirm the selection.
The TRAV'LER interface will then acknowledge which satellite has been selected. Press the Enter button.

6. The interface will ask if you want to turn the power off. Press the Enter button to choose "No" and start a new search for your chosen satellite. Press "SELECT" then "ENTER" to choose "Yes" and turn off the antenna.
The TRAV'LER antenna will remain in manual mode until you select "Multi-Sat Mode" again.
